

2013

King Instrument Company opened its doors in 1983 with one major goal:
To produce the finest group of rotameters ever sold.

At the time, we occupied a 1,200 square foot space in a multi-tenant building. With two small manual lathes, a cut-off saw, and two drill presses, we began production. The product line consisted of a total of 19 model numbers. In our first year of business, sales were just over \$37,000.

A lot has changed in 30 years. We now run two shifts and utilize the most sophisticated computer controlled machinery. King Instrument Company currently calls its home a 46,000 square foot facility in Garden Grove, California. We now manufacture 95% of the 6,000 meter components used in our products. These include the borosilicate glass metering tubes we call Kinglass. We operate an in-house calibration lab and perform NIST - traceable calibrations conforming to ISA RP 16.6.

We are sensitive to our customer's requirements. In fact, nearly all of our products were designed in response to customer need with our own exceptional quality and distinctive style. The King product line has grown and expanded to satisfy the demands of almost any variable area flowmeter application.

Did we reach our original goal? You be the judge. The next time you're in the market for rotameters consider King Instrument Company. We think you'll agree there is no better time than right now to discover the advantages of the King line.

After all, when it comes to flow . . . we're instrumental.

When it comes to flow...we're instrumental.

ALARM OPTIONS:

Inductive Slot Sensor

The alarm mechanism in this flowmeter is an inductive slot sensor. It is a 2-wire, DC, low current device. It is designed to be used with a switch isolator/barrier. For more information see page 49.

Note: We can supply switch isolator/barriers upon request. User must provide power supply voltage.

Inductive Ring Sensor

ALARM OPTIONS: 7430

Inductive Ring Sensor

7400 Series flowmeters with metallic floats can be ordered with an inductive ring sensor that is able to detect a predetermined rate of flow.

Inductive ring sensors are 2-wire, DC, low current devices and are designed to be used with a remote intrinsic safety barrier /switch isolator. Sensors are available as either proximity or latching devices. The sensor threaded on the screw can be positioned to trigger at any point on the scale. It is able to detect the metal float (see table below) by producing and electromagnetic field that senses the float within its sensing zone.

The inductive sensor connects to a barrier/switch isolator which powers the sensor and provides the desired switching option. Barrier/switch isolators are available with 220VAC, 110VAC or 24VDC supply voltage requirements, contain single pole double throw (SPDT) relays, and are DIN rail mountable. See barrier/switch isolator specifications for electrical connections and further details.

Note: We can supply switch isolator/barriers upon request. User power supply voltage must be provided.

Electrical Specifications:

Type: Inductive Proximity or Latching

Supply Voltage: 5-25V DC (Switch Isolator)

Output: NAMUR

Output Load Current:

<=1 mA – Float Present

>= 3 mA (15 mA max) – Float Absent

Switching Frequency: 2 kHz

Housing Rating: IP67

Wiring: PVC Covered, 2 Conductor, 26 AWG, 6.5 Feet Long. Brown (+), Blue (-)

Pepperl & Fuchs Ring Sensor

Approvals:

UL: General Purpose

FM: Intrinsically Safe

CSA: Intrinsically Safe

CENELEC: Intrinsically Safe

Electrical Connections: See barrier/switch isolator specifications for details.

Fiber Optic Sensor

The fiber optic alarm sensor is an available option for all 7400 Series flowmeters. The sensor is used to detect a predetermined rate of flow. The sensor can interface directly to a Programmable Logic Controller (PLC) or when connected to a separate relay can trigger a local or remote alarm.

The fiber optic sensor is mounted in a junction box attached to the side of the flowmeter. The sensor uses a pair of plastic transparent cables, an emitter and receiver, to transmit the light generated by the sensor. Each cable is terminated in the housing shown below. The housing is threaded on a screw and can be positioned at any point on the scale.

Electrical Specifications:

Supply Voltage: 10-30 VDC

Supply Current: 25 mA

Output: NPN Sinking, N.O. & N.C.
PNP Sourcing, N.O. & N.C.

Output Rating: 150 mA Max Total Load

FOOTNOTES:

Because of the compressible nature of gas, meters used in this service may be subject to float bounce:

- The meter is used in very low pressure applications.
- There is more than two pipe diameters between the meter and a control valve.
- The gas being metered is a low Specific Gravity.

- The meter is operating below 20% of full scale flow.
- Back pressure is insufficient to stabilize the float.

Tubes with the designation "G" have rib-guided floats. Tubes designated "P" have pole-guided floats.

A chemically resistant, borosilicate glass tube meter series for liquid service. It features a clear polycarbonate shield surrounding the glass metering tube. It is assembled in a 304 SS tie rod frame. It offers CPVC and Hastelloy C-276 as optional materials of construction, suitable for a wide range of chemical and corrosive applications. O-ring seals allow for easy disassembly and cleaning.

These 316L Stainless Steel meters feature flange connections, all welded construction (no elastomers), and an end to end length of 250mm. A float and tapered tube design provides longer, more linear scales. A 4-20mA transmitter option adds to its versatility.

FLOAT TYPES

ALARM OPTIONS: 7300, 7470, 7480, 7600, 7900 SERIES

Latching Reed Switch

A latching reed switch is available for 7300, 7470, 7480, 7600 and 7900 Series flowmeters.

The switch assembly is mounted on the side of the metering tube by a dovetail or guide rod. The switch can be positioned to trip at any point on the scale.

The switch is a reed type and uses a biasing magnet to give it the latching feature. The float contains hermetically sealed magnet(s), so when the float comes in close proximity to the switch it closes and remains closed (latched) when the float moves past the switch. When the flow returns to normal and the float moves below the switch it resets itself. Multiple switches can be used.

Switch Isolator Option

Latching reed switches can be used as stand alone devices, or may be connected to a switch isolator for intrinsically safe applications. The purpose of the switch isolator is to supply electrical signals between safe and hazardous areas in either direction while limiting the amount of energy that can be transferred even under fault conditions. Switch isolators are available with 220 VAC, 110 VAC or 24 VDC supply voltage requirements, contain single pole double throw (SPDT) relays, and are DIN rail mountable. See switch isolator specifications for electrical connections and further details.

Electrical Specifications:

Switch Type: SPDT, Latching
Max Contact Voltage: 100 VDC
Max Contact Current: 0.2 A DC
Max Contact Power: 4 Watts DC
Breakdown Voltage: 200 VDC
Initial Contact Resistance: 0.15 OHMS
Standard Pull-In Range: 15-40 ampere turns

Pepperl & Fuchs Slot Sensor Approvals:

UL: General Purpose

FM: Intrinsically Safe

CSA: Intrinsically Safe

CENELEC: Intrinsically Safe

Optional 4-20 mA Transmitter:

To Convert the measured flow into a 4-20 mAdc signal, an angle of rotation transmitter is mounted to the indicator. This device is factory calibrated to ensure accuracy and should only be adjusted by King Instrument Company.

The proper and safe operation of the device requires that the specific listed below are not exceeded:

Specifications:

Power Supply: 12 to 33Vdc

Maximum Current Consumption: 40mA

Temperature Limits: -13° to 158° F (-25° to 70° C)

Output: 4 to 20 mAdc

Accuracy: <= 0.5%

Linearity: ± 0.4%

Influence From Bearing: ± 0.1%

Temperature Influence (ambient):

± 0.3% per degree C

Power Supply Influence: ± 0.1%

Load Resistance Influence: ± 0.1% at R max.

Electrical Connections:

Transmitter Layout Rear View

Zero: Potentiometer P1 for zero point

SPAN: Potentiometer P2 for measuring range and value

1: Zero point mark on transmitter housing

2: Zero point mark on transmitter shaft

S1: Switch for reversing rotation (Not Applicable)

2-Wire Connection

R_{ext}: External Resistance = power Supply (V) - 12V Output Signal (mA)

H: DC Power Supply (12 - 33 V)

Inductive Slot Sensor

All 7100 Series flowmeters may be fitted with one inductive slot sensor.

Inductive sensors are 2-wire, DC low current devices and are designed to be used with a remote barrier/switch isolator capable of powering the sensor and providing the desired switching option(s). Barrier/switch isolators are available with 220 VAC, 110 VAC or 24 VDC supply voltage requirements, contain single pole, double throw (SPDT) relays, and are DIN rail mountable. (Only 24 VDC units are actually powered by the rail.) See barrier/switch isolator specifications for electrical connections and further details.

Electrical Specifications:

Type: Inductive

Alarm Options

BARRIER/SWITCH ISOLATOR

A barrier/switch isolator is designed to supply power to the NAMUR sensor, read the output state of the sensor and provide the desired safety and switching options based on the sensors current state. The barrier/switch isolator has three sets of connections: the supply voltage (powers the barrier), an input stage (accepts sensor inputs), and an output stage (relay or transistor switching). Supply voltages are 220VAC, 110VAC, or 24VDC. Switch isolators may receive an input from inductive sensors or dry mechanical contacts. The input circuit between the sensor or mechanical contact and the switch isolator is suitable to be installed in a hazardous area under the designation "Intrinsically Safe". Supply voltage and switching options must be specified when ordering.

WARRANTY

Meters are warranted against defects in materials and workmanship to the original user for a period of thirteen (13) months from the date of factory shipment, provided the meter is installed, operated and maintained in accordance with the Company's instructions and recommendations.

This warranty does not apply if the failure is caused or contributed to by any of the following: improper handling, improper storage, improper installation, abuse, unsuitable application of the product, lack of reasonable and necessary maintenance, use exceeding suggested pressure and temperature maximums, improper packaging for return, or repairs made or attempted to be made by other than the Company.

THE COMPANY MAKES NO WARRANTY AS TO THE FITNESS OF ITS PRODUCTS FOR SPECIFIC APPLICATIONS.

This warranty is valid for the original end-user only and does not apply to products that have been damaged or modified. This warranty is nontransferable and is limited to replacement or repair. The liability of the Company arising out of its supply of the products, or their use, shall not in any case exceed the cost of correcting defects in the products as above set forth.

NOTE: If it is determined by King Instrument Company that repair charges are required, our Quality department will contact you to receive a purchase order for the work needed. If we do not receive a purchase order from you within 30 days from our initial request, we will return the meter freight collect without repair. We are unable to store returned meters over 60 days.

DISCLAIMER

This warranty is a limited warranty and shall be in lieu of any other warranties, express or implied, including but not limited to any implied warranty or merchantability or fitness for a particular purpose. There are no other warranties which exist beyond the description or face hereof.

In no event shall the company be liable for loss of profits, indirect, consequential or incidental damages.

CAUTION

Pressure and temperature limits are based on a study of the engineering data for particular materials used in construction and on the design of individual models. This information is supplemented by destructive testing results. Pressure and temperature maximums for these meters are simultaneous.

WARNING: Meters with stainless enclosures must never be operated without shields securely in place. Meters exposed to difficult environments such as those created by certain chemicals, excessive vibration or other stress inducing factors could fail at or below the suggested maximums. NEVER operate meters above pressure and temperature maximums. Meter failure could result in damage to equipment and serious personal injury.

Always use suitable safety gear including OSHA approved eye protection when working around meters in service. We are happy to pass along chemical compatibility information that has been published by the manufacturers of raw materials used in our products; however, this information should not be construed as a recommendation made by King Instrument Company, Inc. for a specific application. Specifications are subject to change without notice.

RETURNED GOODS

Returns for shortages or inaccurate shipments must be made to King Instrument Company within ten days of receipt. A Return Materials Authorization (RMA) number is required for all returns shipped for repair, warranty evaluation, replacement, exchange or credit. Please call the sales department for an RMA number. A copy of the invoice or shipper must be included. The RMA number must be clearly marked on the shipping package. There may be a restocking charge on items that are returned when the error is not King Instrument Company's. Items over one year old are not returnable. Damaged shipments should be handled through the shipping carrier. C.O.D. return shipments will not be accepted. If there are any questions call the sales department Monday through Friday, 7:00 a.m. to 4:30 p.m., Pacific Time.
